

# Ekran System

User activity videorecording solution

**Modern solution for your corporate network that allows you to view and record everything that takes place on all user screens: terminals, local PCs, and virtual machines.**

## Kriptone

Unlike many controlling and recording applications, Ekran System does not have any limitations with recording a large number of concurrent terminal sessions with only one Client installed on the terminal server.

**Due to real-time alert notifications and easy to analyze form of data representation – a video record – you will take an absolute control of what is happening in your company.**

PCI/HIPAA/SOX COMPLIANCE SOLUTION

## Why does my company need Ekran System?

Ekran System is the most effective tool for controlling your company's digital presence.

### Control your critical business applications and IT infrastructure

Do you use shared applications and data?

**Use Application Filtering feature to focus recording on key activities**

Terminal access requires intensive control, as we often share critical business applications and data, like accounting and CRM systems, engineering software packages, corporate databases, code storage, etc.

**Ekran System makes a video record of each terminal session run on the server, indexes it with the keywords for quick searching and keeps them stored in the internal database. In such a way you can always connect to any “live” session currently running at the server. And real-time alert notifications won’t give you a chance to miss any suspicious action!**

### Control System Administrator work

The work of server administrators, internal or contracted, needs special attention due to their escalated privileges, as they have permission to change settings and make root level modifications to the system.

**Record all terminal sessions: Citrix, Terminal Services, VNC, Remote Desktop, VDI, etc.**

**Ekran System records all user sessions, including the privileged ones, and it’s practically impossible to avoid. You will be aware of any activity on the server, from configuration changes to any other user and system management actions.**

Ekran System works with Citrix, Terminal Services, VNC, Remote Desktop access, and more configurations.

## Prevent timely all suspected corporate policy violations

You never know when and who from your employees can violate the corporate policy concerning computer and information security. If such unpleasant episode occurs, you need to quickly figure out what's happening and who is involved.

**Real-time alerts notify you about all potentially harmful actions**

**With Ekran System's real-time alert notifications, from now on you can prevent all possible forbidden or harmful events timely.**

Thus, you can set a combination of triggers when users, for example, launch certain applications, open certain websites, type a keyword. You adjust alert parameters the way you need and receive on-screen notifications on all suspicious actions. Alerts also include direct links to screen captures with corresponding event, so you can easily reconstruct the precise picture of the incident at once. Alert notifications may come to your e-mail address as well.

## Prevent the misuse of insider information, sensitive data and intellectual property

Every company possesses intellectual property assets and confidential information. And needless to say, the misuse, corruption or theft of such valuable data can be catastrophic for any business.

Ekran System allows you to monitor programs, internal databases, design systems, and other critical applications.

**Protect insider financial information, plans, engineering drawings and other critical data from leakage**

**Smart keylogging and then keyword-based search allows you to detect the facts of sensitive information misuse easily – simply find the key episodes in seconds and replay them to see what the matter was. Wrap keyword search into the Ekran System real-time alerts and be maximally proactive with timely notifications!**

## Control your employees work

Has productivity from your employees inexplicably dropped off? Well, you never know what they might be busy doing, don't you?

**Facebook, YouTube,  
chats, on-line or off-line  
games?..**

Your employees may be spending too much time on social networks, watching videos and movies, playing popular online games like World of Warcraft, or endlessly chatting on programs like ICQ, Skype, MSN, etc.

**Ekran System allows you to generate a full list of any applications started, analyze how long they were used, and watch the entire episode of any session you are interested in exploring further. It will allow you discover all violations and will give you the ammunition to adequately and expeditiously react. With the help of easy keywords searching mechanism, you will always find the key episode quickly.**

## Identify and resolve network problems

Ekran System is also extremely helpful in identifying and resolving technical problems. With your administrator(s) and or managers having access to "live" client sessions, they will be able to see exactly what's going on right now, as well as be able to look back and follow the chain of events that led to a particular problem or incident .

**Administrators can see  
how situations unfolded  
with their own eyes**

**Thanks to Ekran System's searching capabilities, administrators are able to save their time and find the needed action even quickly. It is possible to perform searches using the following metadata: user name, host name, application name, document name, entered text, activity time, URL address, and others.**
