

Ekran System

User activity videorecording solution

Keep Your Finger on the Pulse!

The Ekran System provides with a number of benefits as compared with other popular corporate security systems

PCI/HIPAA/SOX COMPLIANCE SOLUTION

Kriptone

BENEFITS

Permanent monitoring of all the terminal servers and workstations

Ekran System provides you with video recording of all terminal sessions on your servers and also all local and remote sessions on the workstations in the corporate network. You can totally control actions of all users regardless of their permissions and privileges.

Timely reaction to all potentially harmful events

Real-time alerts with direct link to the corresponding record make control even more proactive. By the way, you have no chance to miss any potentially forbidden action as you can receive alert notifications to your e-mail as well!

Extremely easy to use and perform analysis

Say “no” to a great many tabs, dozens of various reports and information types to be compared and analyzed. Maximal simplicity of the interface and the most integrated and easy to analyze format: video record of everything that took place on the screen. You can see everything with your own eyes. Application filtering feature allows you to make monitoring more focused as you can choose to record only selected list of applications or form a skip list for them.

Save your time – replay only the key episodes

Though Ekran System creates the complete video record of all sessions, each episode is indexed with text information and corresponding keystroke and URL address log. Thanks to this, it is possible to perform the simple search by keywords. In addition, you are able to organize your search requests by saving them in the system and thus perform all the next searches even quicker.

Easy installation and management

You can manage Ekran System solution easily via web-based Management Tool. It provides access to the system configuration, and in particular to Client installation options (remote install or digitally signed installation package for 3rd-party systems).

Easy infrastructure integration

Ekran System also integrates easily with Active Directory user and permission management. Meanwhile Ekran System Clients can be installed on the servers and workstations, which are included or not included into Active Directory. Clients can be installed both manually and remotely. In addition, Ekran System integrates with your SIEM system using log files.

Advanced Reports Generation

Seven types of generated reports allow you to receive the information on the activity of multiple Clients, alert events, and detected URLs, and get statistics on time spent in each application or on each web-page by the user. Scheduled reports can be generated on a daily, weekly, or monthly basis and sent via email at the specified time. Reports can also be generated manually at any time for any time period.

Universal alternative to Citrix SmartAuditor

First of all, Ekran System records Citrix sessions. Plus it provides you with full-fledged mechanisms of user activity monitoring, including live sessions streaming, alert notifications, quick search engines, user-friendly reports, and much more. Unlike Citrix SmartAuditor, Ekran System works in XenDesktop7. And the most pleasant thing is that you will save your budget three times as much obtaining our solution.

Professional support

Purchasing Ekran System you get not only a reliable monitoring tool but also the support team of experienced professionals who are always ready to solve all possible encountering issues during the program usage. In addition, we are eager to consult you regarding different practical tasks concerning Ekran System deployment and utilization.

The most cost saving offer on the market

Ekran System is the most cost saving offer in its market segment. Besides a good pricing, Ekran System possesses the flexible licensing system. One Server Client allows you to control and record all sessions at this server. If you also want to record all local and remote sessions at workstations, you will need a Workstation Client for each workstation to be controlled. Ekran Management Tool is provided free of charge.
